

# Environmental Activities

## Achieving Harmony with Nature

We have been addressing pollution prevention issues since our company's foundation. Amid recent concerns over environmental protection, our Kawagoe Works site obtained ISO 14001 certification for environmental management system in 1997. In fiscal 2003, our Kawagoe Works site expanded its environmental management system to our head office site and NJR Chichibu Co., Ltd. for certificate of registration and launched company-wide environmental protection activities. Successful activities for reduction of environmental impact could include "total abolition of use of chlorinated organic solvents," "total abolition of use of HCFC," and "reduction of waste emissions." In fiscal 2004, for fulfilling environmental activities of the head office and administrative/indirect departments, "sales promotion of environment-friendly products," "improvement in primary business," and "expansion of green procurement" were added as new goals to formulate a third mid- to long-term plan. In April 2005, we started "quality/environmental management" action and will promote environmental improvements while ensuring consistency of environmental activities with other activities.

Not only companies but also administrations, groups and people must participate actively in conducting direct and indirect activities related to environmental impact reduction. To fulfill our "corporate social responsibility," New Japan Radio Group will pursue "maintenance of environmental improvement planning for environmental impact reduction," "construction and operation of risk management system," and "observance and enforcement of compliance."
