

## X-Band Radar Front End

### ■ GENERAL DESCRIPTION

NJT1968D is designed for the front end of marine radar system.

It features a small size and a light weight operable at any frequency between 9.40GHz and 9.42GHz.

This front end module consists of PIN diode Limiter, GaAs FET low noise amplifier, Image rejection mixer, Local VCO with buffer amplifier.

The stability of the local VCO frequency by the input RF power is increased effectively by the buffer amplifier which is located between image rejection mixer and local VCO.
