

Single Channel Low power Comparator

FEATURES ($V^+ = 5V, V^- = 0V, T_a = 25^\circ C$)

- Guaranteed Temperature: $-40^\circ C$ to $+125^\circ C$
- Input Offset Voltage: 3mV max.
- Supply Current: 0.5mA max.
- Operating Voltage: $+2V$ to $+36V$ or $\pm 1V$ to $\pm 18V$
- Integrated EMI filter
- Low-level Output Voltage: 80mV typ. ($I_{sink} = 4mA$)
- Response Time: 1.3 μs typ.
- Open Collector Output
- GND sensing
- Internal ESD protection: Human Body Model $\pm 2000V$ typ.
- Package:
 - NJM8190: SOT-23-5, SC-88A
 - NJM8191: SOT-23-5, SC-88A, DFN6-G1 (ESON6-G1)

GENERAL DESCRIPTION

The NJM8190/NJM8191 are single comparators designed specifically to operate wide range of supply voltage and temperature.

These comparators featured low input offset voltage of 3mV max. low supply current of 0.5mA max. DC characteristics are also 100% tested and guaranteed from -40 to $125^\circ C$.

The NJM8190/NJM8191 are available in DFN6-G1(1616) of small size Package, significantly reducing the required portable application's board area.

(1) Input voltage is the voltage should be allowed to apply to the input terminal independent of the magnitude of V^+ .

(2) Output voltage is the voltage should be allowed to apply to the output terminal independent of the magnitude of V^+ .

(3) Short-circuits from the output to V^+ can cause excessive heating and potential destruction.

(4) Short-circuit can cause excessive heating and destructive dissipation. Values are typical.

Large Signal Response Time	t_{RL}	$R_L=5.1k\Omega$ to V^+ $V_{ref}=1.4V$, TTL input	—	250	—	ns

(1) $V_o=1.4V$, $R_s=0\Omega$, $5V < V^+ < 30V$, $0 < V_{ICM} < (V^+ - 1.5V)$.

(2) The direction of the input current is out of the IC due to the PNP input stage.

(3) Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage must not be less than $-0.3V$ (or $0.3V$ below the negative power supply, if used).

(4) The response time specified is for a $100mV$ input step with $5mV$ overdrive.

■APPLICATION NOTE

EMIRR(EMI Rejection Ratio) Definition

EMIRR is a parameter indicating the EMI robustness of an comparator. The definition of EMIRR is given by the following a formula (1). We can grasp the tolerance of the RF signal by measuring an RF signal and offset voltage shift quantity.

$$EMIRR = 20 \cdot \log \left(\frac{V_{RF_PEAK}}{|\Delta V_{IO}|} \right) \quad \dots(1)$$

V_{RF_PEAK} : RF Signal Amplitude [V_p]

ΔV_{IO} : Input offset voltage shift quantity [V]

Offset voltage shift is small so that a value of EMIRR is big. And it understands that the tolerance for the RF signal is high. In addition, about the input offset voltage shift with the RF signal, there is the thinking that influence applied to the input terminal is dominant. Therefore, generally the EMIRR becomes value that applied an RF signal to +INPUT terminal.

[CAUTION]

1. New JRC strives to produce reliable and high quality semiconductors. New JRC's semiconductors are intended for specific applications and require proper maintenance and handling. To enhance the performance and service of New JRC's semiconductors, the devices, machinery or equipment into which they are integrated should undergo preventative maintenance and inspection at regularly scheduled intervals. Failure to properly maintain equipment and machinery incorporating these products can result in catastrophic system failures
2. The specifications on this datasheet are only given for information without any guarantee as regards either mistakes or omissions. The application circuits in this datasheet are described only to show representative usages of the product and not intended for the guarantee or permission of any right including the industrial rights.
All other trademarks mentioned herein are property of their respective companies.
3. To ensure the highest levels of reliability, New JRC products must always be properly handled.
The introduction of external contaminants (e.g. dust, oil or cosmetics) can result in failures of semiconductor products.
4. New JRC offers a variety of semiconductor products intended for particular applications. It is important that you select the proper component for your intended application. You may contact New JRC's Sale's Office if you are uncertain about the products listed in this catalog.
5. Special care is required in designing devices, machinery or equipment which demand high levels of reliability. This is particularly important when designing critical components or systems whose failure can foreseeably result in situations that could adversely affect health or safety. In designing such critical devices, equipment or machinery, careful consideration should be given to amongst other things, their safety design, fail-safe design, back-up and redundancy systems, and diffusion design.
6. The products listed in the catalog may not be appropriate for use in certain equipment where reliability is critical or where the products may be subjected to extreme conditions. You should consult our sales office before using the products in any of the following types of equipment.
 - Aerospace Equipment
 - Equipment Used in the Deep sea
 - Power Generator Control Equipment (Nuclear, Steam, Hydraulic)
 - Life Maintenance Medical Equipment
 - Fire Alarm/Intruder Detector
 - Vehicle Control Equipment (airplane, railroad, ship, etc.)
 - Various Safety devices
7. New JRC's products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this catalog. Failure to employ New JRC products in the proper applications can lead to deterioration, destruction or failure of the products. New JRC shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of its products. Products are sold without warranty of any kind, either express or implied, including but not limited to any implied warranty of merchantability or fitness for a particular purpose.
8. Warning for handling Gallium and Arsenic(GaAs) Products (Applying to GaAs MMIC, Photo Reflector). This Products uses Gallium(Ga) and Arsenic(As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed, please follow the related regulation and do not mix this with general industrial waste or household waste.
9. The product specifications and descriptions listed in this catalog are subject to change at any time, without notice.
