

## AUDIO PROCESSOR with Input Selector

### ■ GENERAL DESCRIPTION

The **NJW1185** is a sound processor with input selector includes all of functions processing audio signal for TV, such as input selector, tone control, balance, volume, and mute functions.

Also the **NJW1185** includes eala and voice enhancement.

The eala reproduces a natural surround sound with clear vocal orientation. And also, voice enhancement gives clear sound such as dialogs.

All of internal status and variables are controlled by I<sup>2</sup>C BUS interface.

### ■ PACKAGE OUTLINE

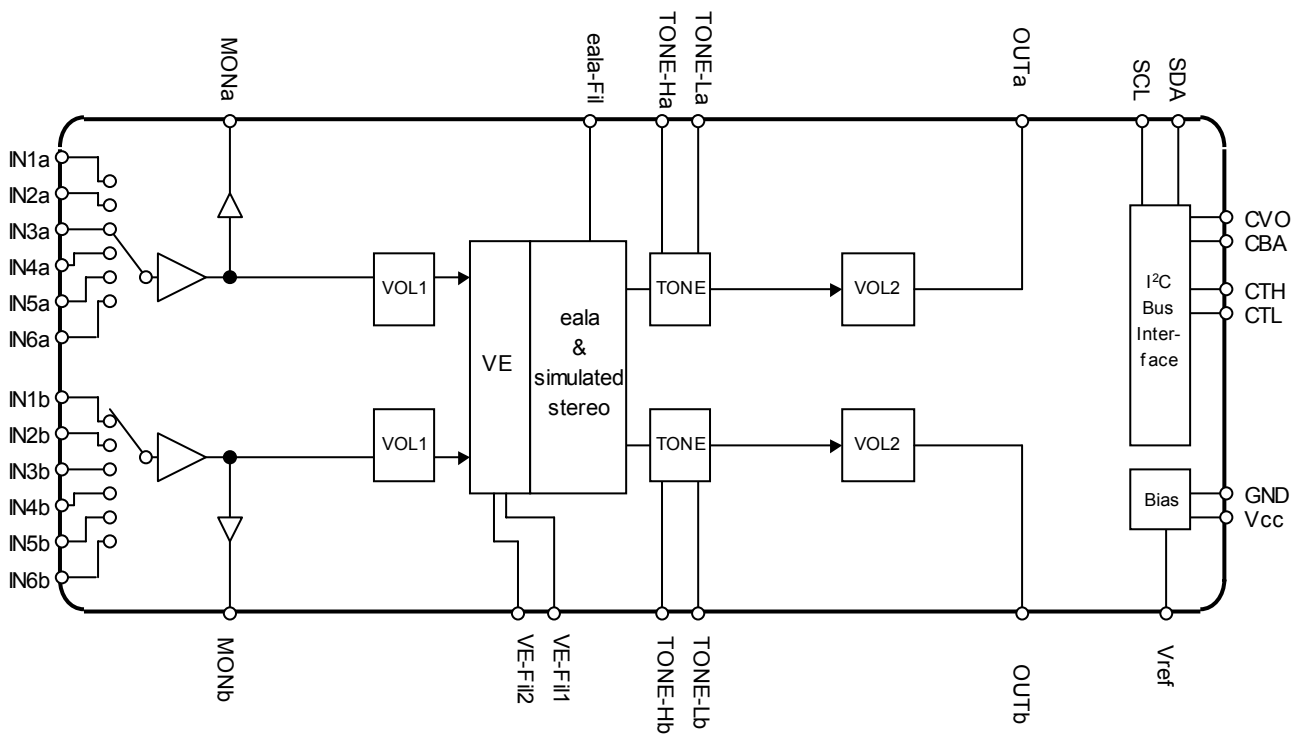

**NJW1185V**

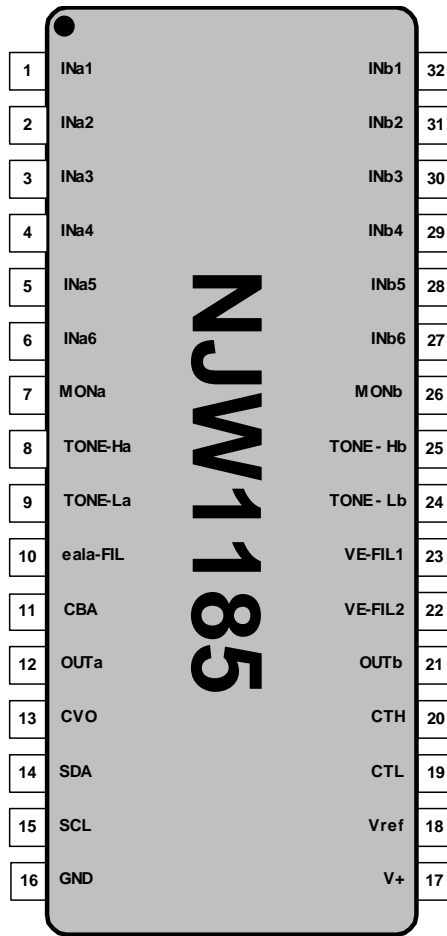

### ■ FEATURES

- Operating Voltage 7.5 to 13V
- 6ch Input Selector
- Tone Control Bass / Treble
- eala(NJRC Original Surround System)
- Simulated Stereo
- Voice Enhancement System
- I<sup>2</sup>C BUS Interface
- Bi-CMOS Technology
- Package Outline SSOP32

## APPLICATION CIRCUIT

(\*) Separate the I<sup>2</sup>C bus line and Signal line from the following terminals for avoiding digital noise problem and cross talk.

Pin No.	Symbol	Pin No.	Symbol
8	TONE-Ha	23	VE-Fil1
9	TONE-La	24	TONE-Lb
10	eala-Fil	25	TONE-Hb
22	VE-Fil2	-	-

(\*) Cross talk performance may be effected by PCB patterning and Input resistor "Rin" in relation to input impedance. Widen intervals of input lines (1pin to 6pin, 27pin to 32pin) and put guard patterns (ground patterns) among input lines and Monitor outputs (7pin, 26pin) for avoiding cross talk problem.  
Further, cross talk performance may be effected by input resistor "Rin". The recommended "Rin" value is 20kΩ or less. In consideration of an actual operating condition, please decide Rin values after evaluating. (The NJW1185 input impedances are 48kΩtyp.)

C<sub>b</sub> ; total capacitance of one bus line in pF.

NOTE). Data hold time : t<sub>HD:DAT</sub>

Please hold the Data Hold Time (t<sub>HD:DAT</sub>) to 300ns or more to avoid status of unstable at SCL falling edge.

The SDA block in the NJW1185 does not hold data. Add external data-delay-circuit of the SDA terminal, in case of not providing a hold time of at least 300nsec for the SDA in the master device.

The time-consists of the data-delay-circuit of the SDA terminal are as follows.

- (a) Low level → High level :  $T_{LH} \approx R_P * C_D$
- (b) High level → Low level :  $T_{HL} \approx R_D * C_D$

In addition, Schottky barrier diode (SBD) influences a Low level at the Acknowledge. Therefore choose the low forward voltage (V<sub>f</sub>) as much as possible.

## ■ DEFINITION OF I<sup>2</sup>C REGISTER

### ◆ I<sup>2</sup>C BUS FORMAT

S: Starting Term  
A: Acknowledge Bit  
P: Ending Term

### ◆ SLAVE ADDRESS

Slave Address								Hex
MSB							LSB	-
1	0	0	0	0	0	0	0	80(h)

### ◆ CONTROL REGISTER TABLE

The select address sets each function (Volume, Balance, Tone Control, Surround, Voice Enhancement, Input Selector).  
The auto increment function cycles the select address as follows.
