

## 2channel MOSFET Drive Switching Regulator IC for Buck Converter

### ■ GENERAL DESCRIPTION

The **NJW4162A** is a 2 channel MOSFET Drive switching regulator IC for buck converter that operates wide input voltage range from 4.3V to 40V. The oscillating frequency range can set within 100kHz to 1MHz by external resistor. It also has an external synchronous function.

It has individual Standby functions, Soft Start functions and Power Good functions for each channel, therefore a start-up control and/or operating condition monitoring are available with a microcomputer.

The **NJW4162A** is suitable for a logic voltage generating circuit from high input voltage such as Automotive. Office Automation and Industrial applications.

### ■ FEATURES

- Pch MOSFET Driving                      Driving Voltage  $V^+$ -10V(typ.)
- Maximum Rating Input Voltage      45V
- Wide Operating Voltage Range      4.3V to 40V
- PWM Control
- Maximum Duty Cycle 100%
- Wide Oscillating Frequency Range   100kHz to 1MHz
- External Synchronization Function   1,500kHz (max.)
- Anti-Phase switching
- Adjustable Soft Start Function
- UVLO (Under Voltage Lockout)
- Over Current Protection (Hiccup type)
- Thermal Shutdown Protection
- Standby Function
- Power Good Function
- Package Outline                              NJW4162AVC3 : SSOP20-C3

## ■ PIN DESCRIPTIONS

PIN NAME	PIN NUMBER	FUNCTION
V <sup>+</sup>	1	Power Supply pin
SI1 SI2	2 19	Current Sensing pin When voltage difference between the V <sup>+</sup> pin and the SI pin exceeds 150mV(typ.), over current protection operates.
OUT1 OUT2	3 18	Output pin for Power MOSFET Driving The OUT pin Voltage is clamped with V <sup>+</sup> -10V(typ.) at the time of Low level, in order to protect a gate of Pch MOSFET.
PG1 PG2	4 12	Power Good pin. An open drain output that goes high impedance when the IN- pin voltage is stable around $\pm 10\%$ .
IN-1 IN-2	5 14	Output Voltage Detecting pin Connects output voltage through the resistor divider tap to this pin in order to voltage of the IN- pin become 0.8V.
FB1 FB2	6 15	Feedback Setting pin The feedback resistor and capacitor are connected between the FB pin and the IN- pin.
SS1 SS2	7 13	Soft Start timer setting pin. Soft start time is controlled by a capacitor.
EN1 EN2	8 9	Standby Control pin The EN pin internally pulls down with 500k $\Omega$ . Normal Operation at the time of High Level. Standby Mode at the time of Low Level or OPEN.
RT	10	Oscillating Frequency Setting pin by Timing Resistor. Oscillating Frequency should set between 100kHz and 1MHz.
SYNC	11	External Clock Input pin. The SYNC pin internally pulls down with 500k $\Omega$ . It operates by inputting clock signal at the oscillatory frequency that synchronized with the input signal. When not using the external synchronization function, make the SYNC pin the Low level or open.
GND	16	GND pin
N.C.	17	Non Connection
HSREG	20	Output pin of the high side regulator. Connect a bypass capacitor to stabilize a driver circuit.
